Agenda

- History of SF.NET
- OSTG
- What SF.NET offers
- Top Projects
- Question and Answer

SF.Net History

- Larry Augustin's Vision
 - Founder / CEO of VA Software
 - Cold Storage
- Giving back to the community
 - VA in hardware business
- Build a website to allow Open Source to Flourish.
- SourceForge.net was born.
- Five years old this month. (Nov 1999)
- Will hit 1,000,000 Registered users in Q1 2005.

OSTG

open source
technology
group

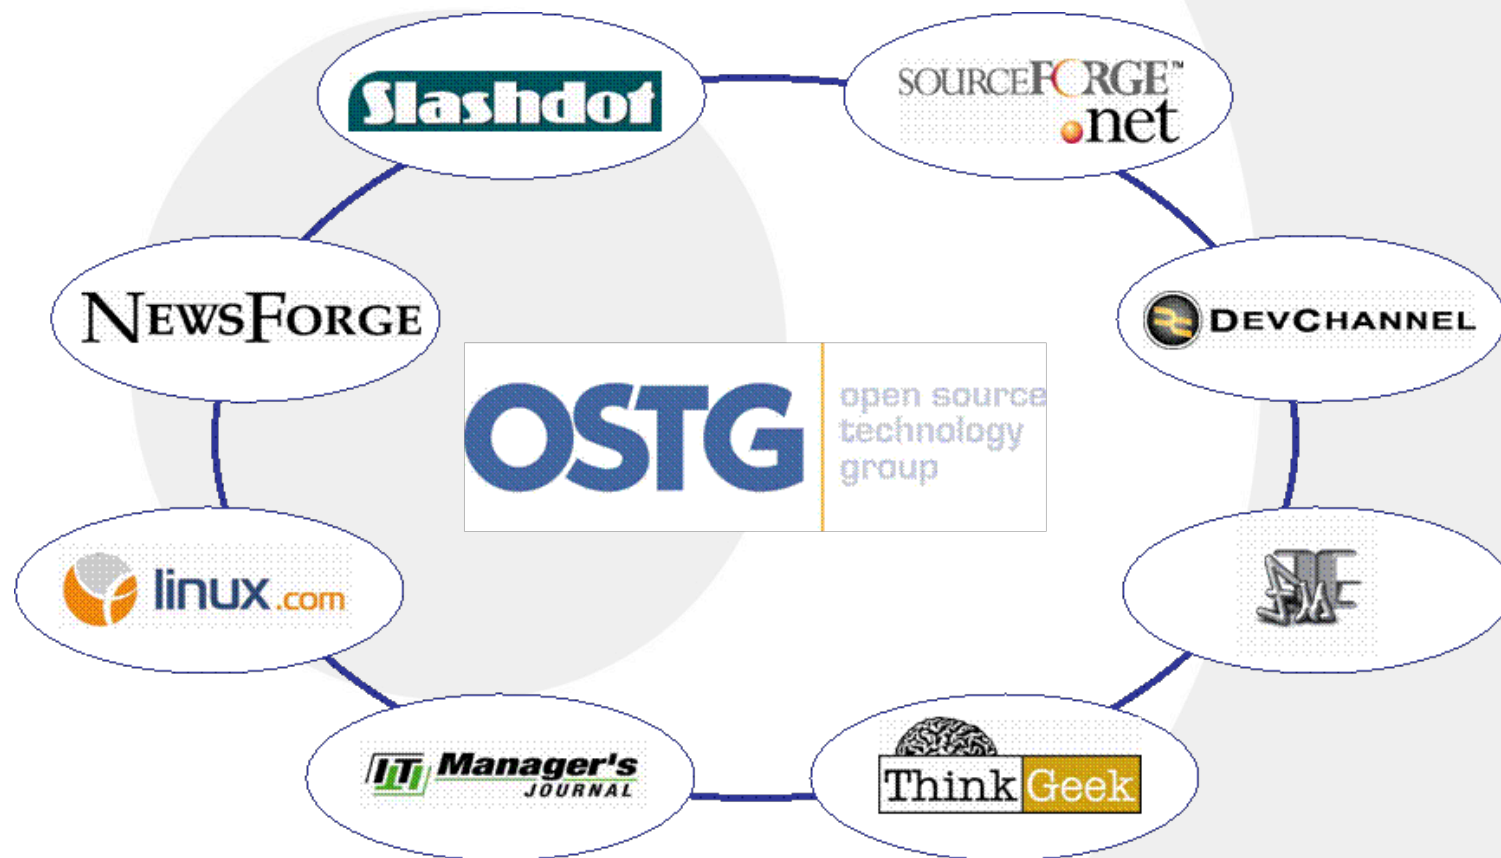

OSTG provides a unique combination of news, original articles, downloadable resources, and community forums to help IT buyers, influencers and users make critical decisions about technology and IT products and services.

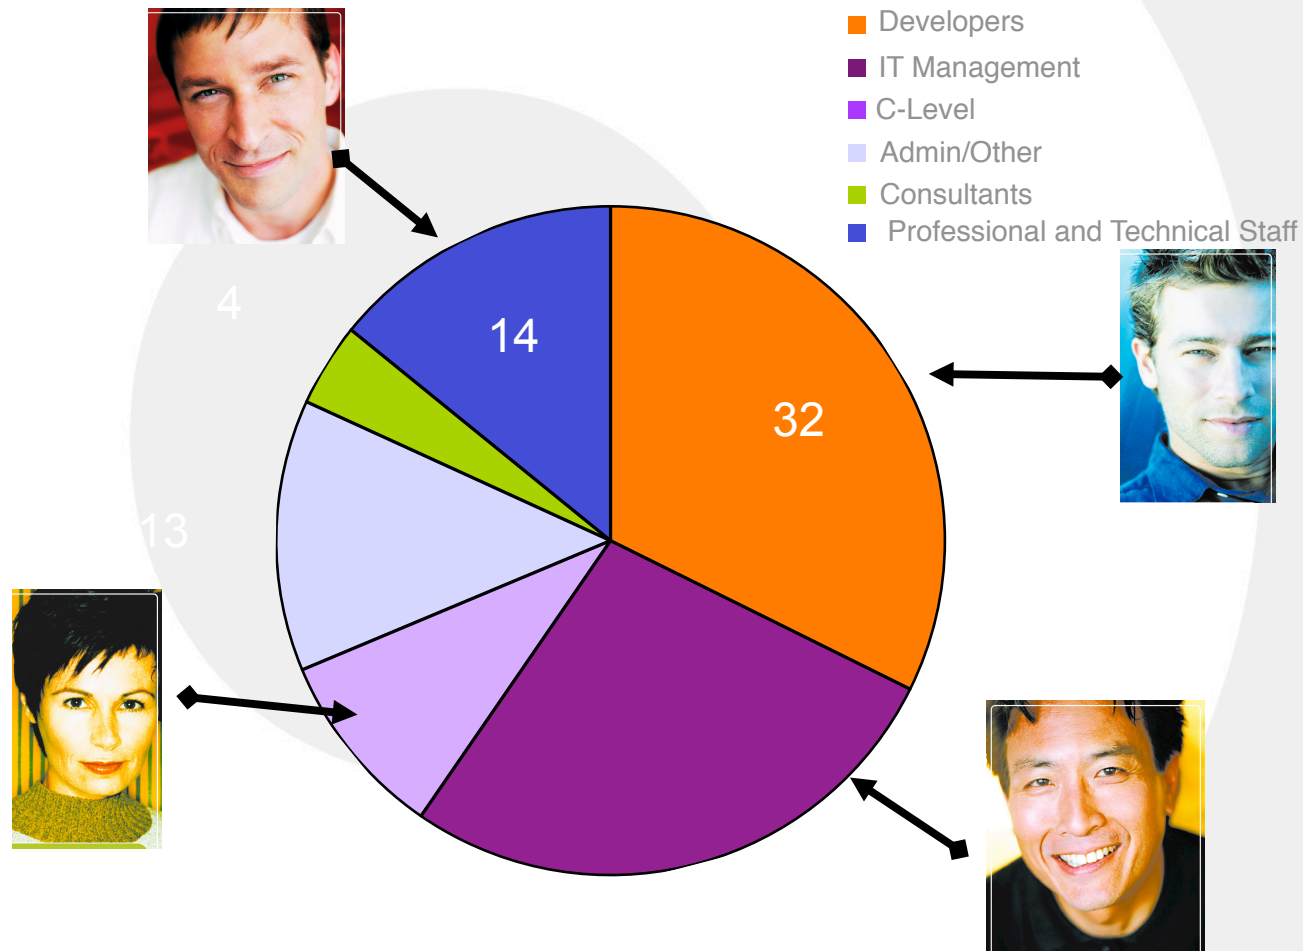

where
technology
is going

The OSTG Technical Network

The Largest Community-Driven Technology Network on the Web:
16 Million Unique Visitors Month*

OSTG Visitor by Job Category- Network Wide

What are OSTG Developers About?

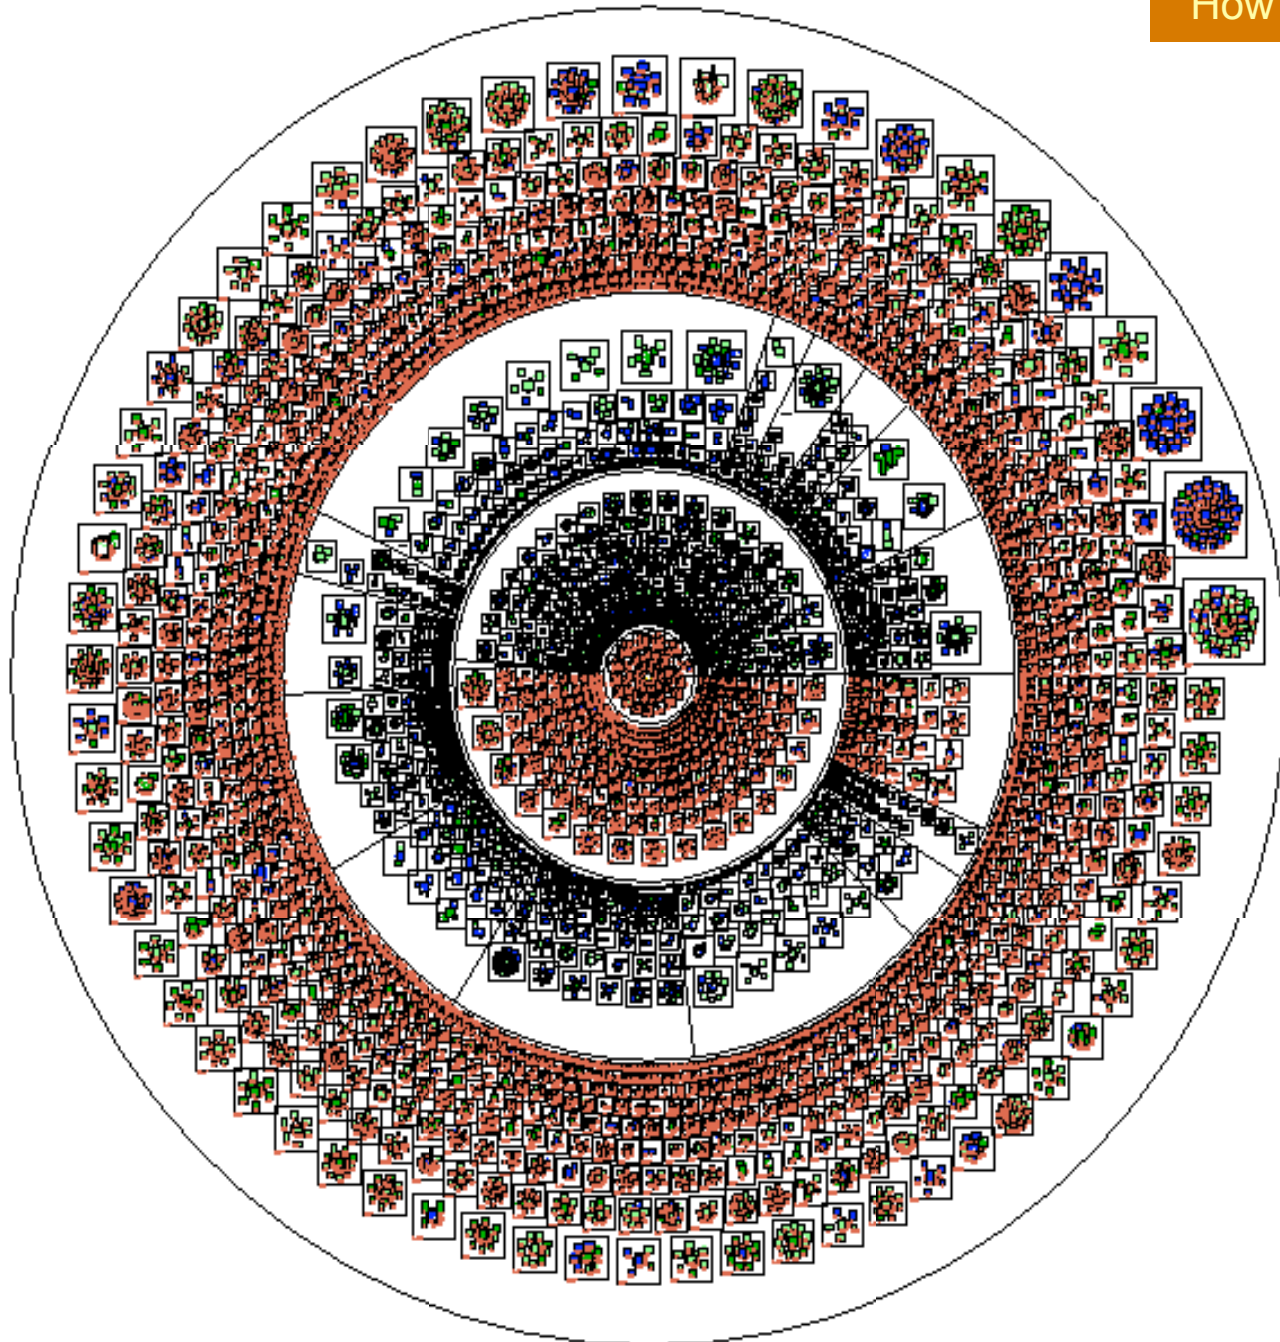

- 10.5 million unique visitors come to OSTG's development sites every month
 - 92,000 projects and 920,000 registered users on SourceForge.net work on every platform available
 - 25% of all projects are Windows-based
 - OSTG developers have an average of 8 years experience and work on an average of 3 platforms, using 5 languages
 - 85% of visitors to OSTG development sites are actively involved in purchasing for their organizations
 - 67% are involved in purchasing Linux and Open Source software
 - 52% are involved in purchasing programming tools

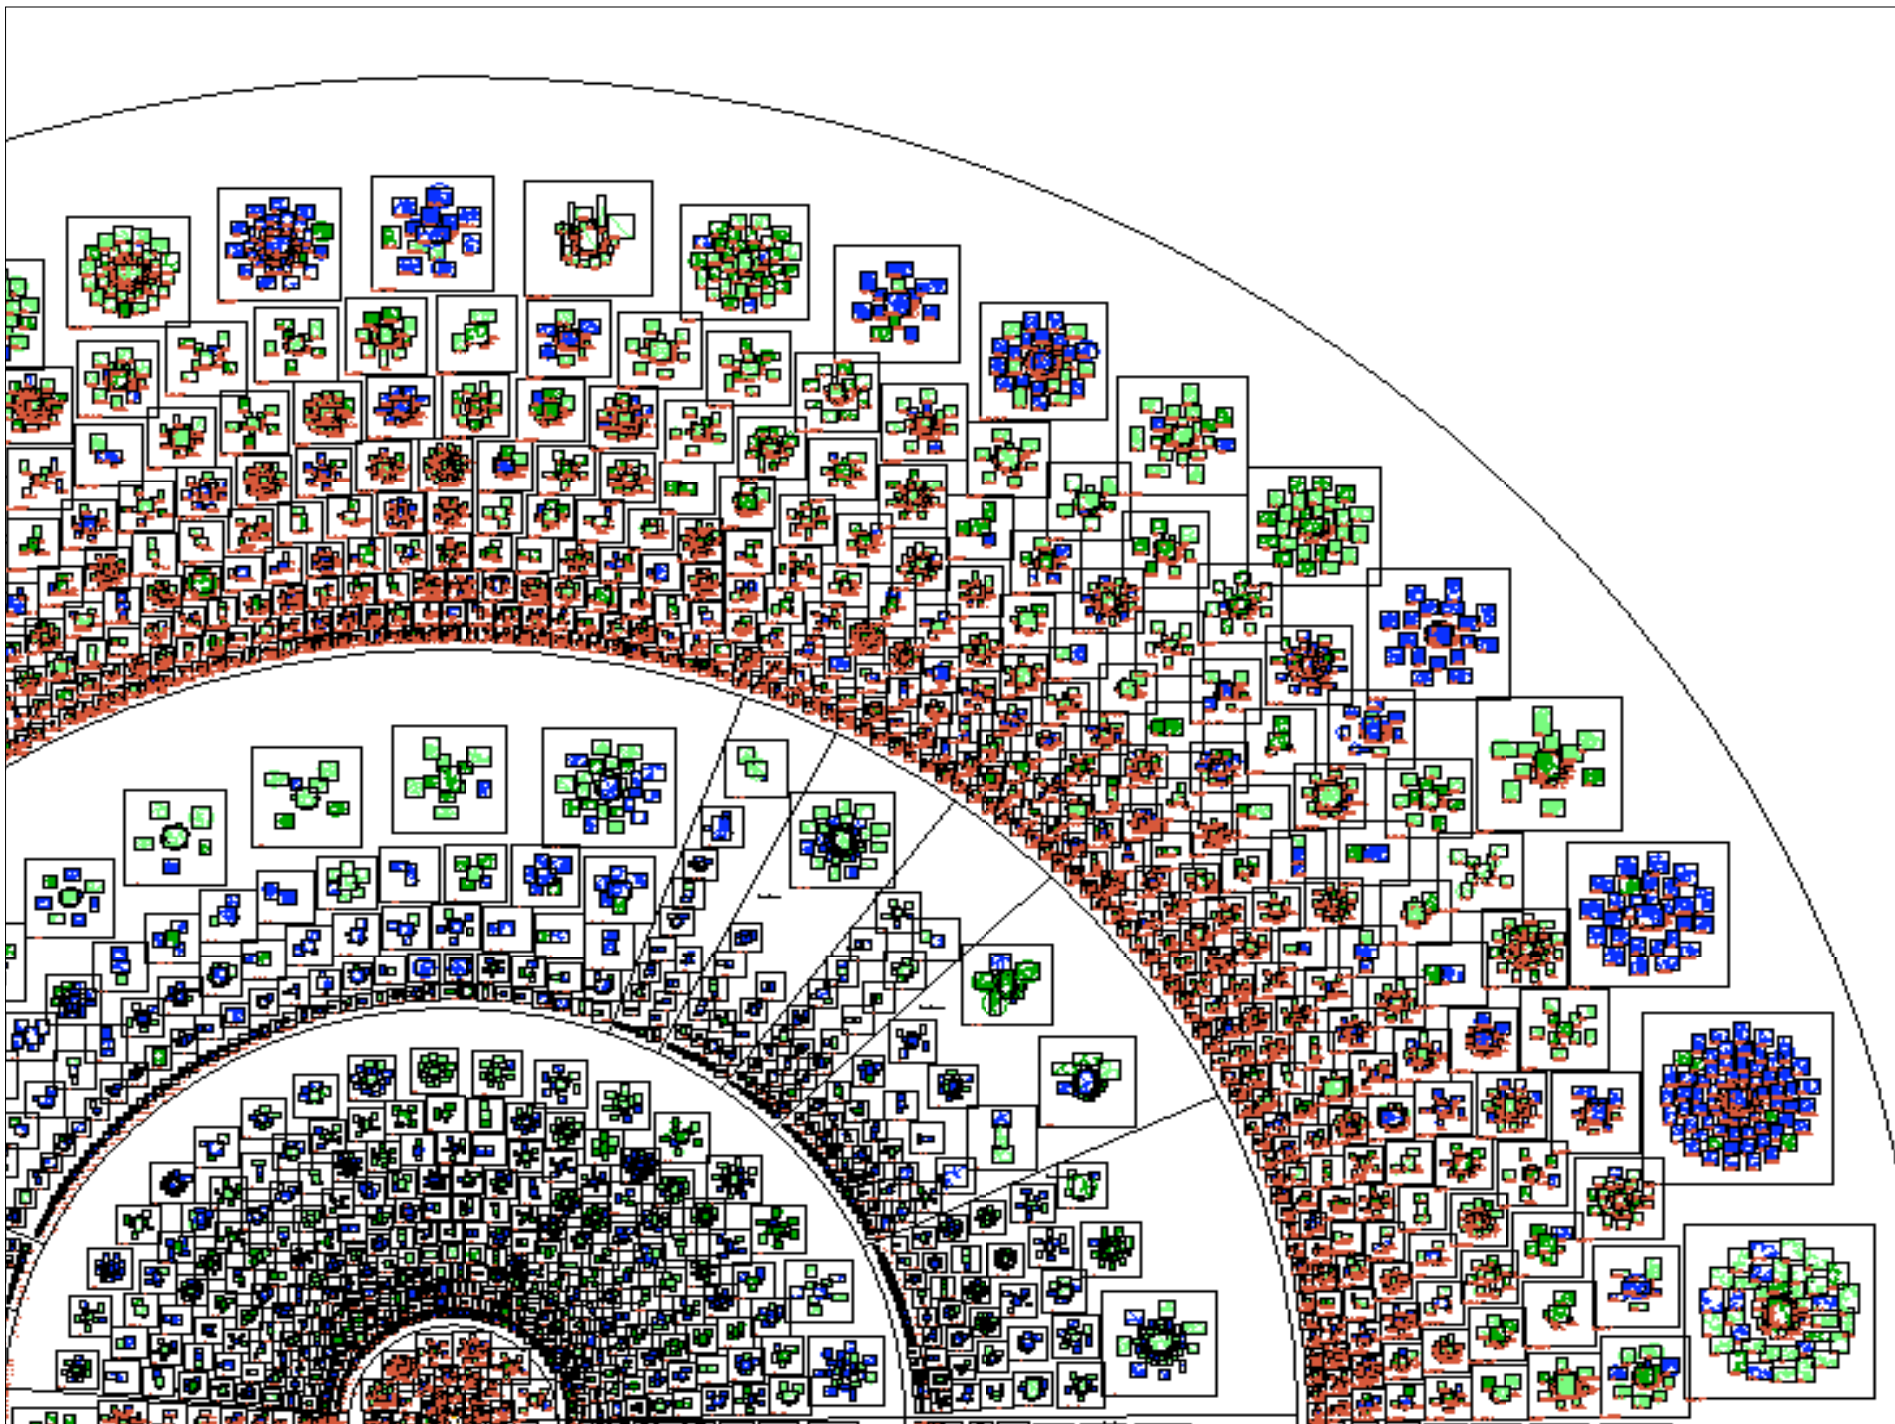

SourceForge.net

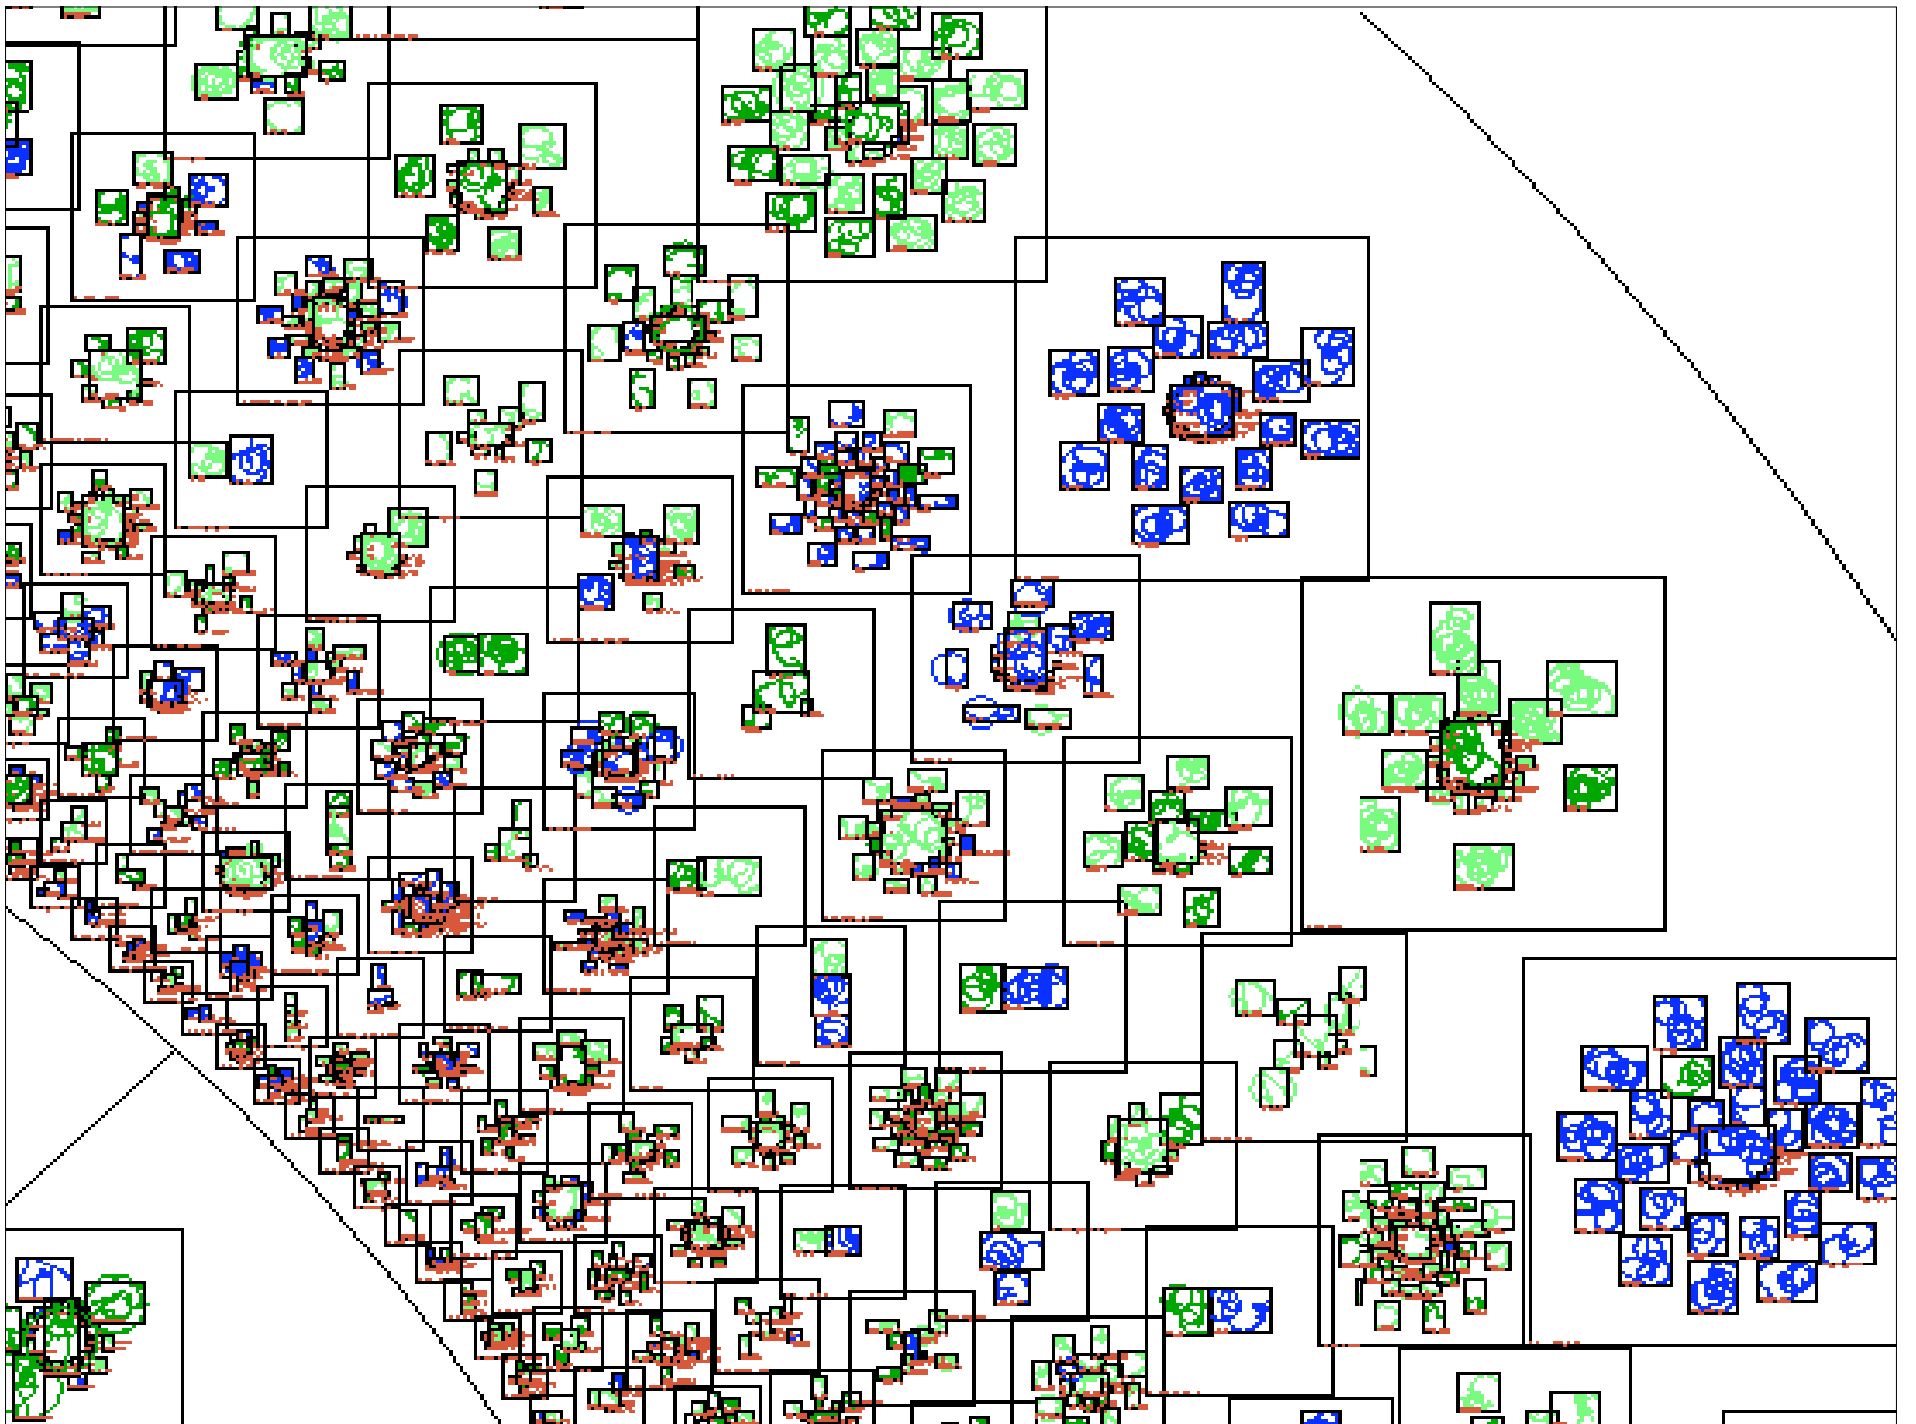

- “The World’s Largest Open Source Development Website”
- 930,000 registered users
- 92,000+ Open Source Projects.

Frequently Asked Questions

Where can I find Open Source software?

There are a number of places on the Internet to find what you're looking for. Try the following, but always verify the [licenses](#) of the software you're looking at to verify it for [OSI certification](#):

- [Freshmeat](#)
- [SourceForge](#)
- [Open Source Directory - OSDir.com](#)
- [BerliOS](#)
- [Bioinformatics.org](#)

I need help with XXX. Can you help me?

No, but these sites might..

- [OSDir.com Forums](#)
- [LinuxQuestions.org](#)
- [FreeNode IRC Network](#)
- [Linux Documentation Project](#)
- [LinuxForum.com](#)

How do I make money on software if I can't sell my code?

You can sell your code. [Red Hat](#) does it all the time. What you can't do is stop someone

Done

Open Source Definition

1. Free Redistribution

The license shall not restrict any party from selling or giving away the software as a component of an aggregate software distribution containing programs from several different sources. The license shall not require a royalty or other fee for such sale.

2. Source Code

The program must include source code, and must allow distribution in source code as well as compiled form. Where some form of a product is not distributed with source code, there must be a well-publicized means of obtaining the source code for no more than a reasonable reproduction cost—preferably, downloading via the Internet without charge. The source code must be the preferred form in which a programmer would modify the program. Deliberately obfuscated source code is not allowed. Intermediate forms such as the output of a preprocessor or translator are not allowed.

3. Derived Works

The license must allow modifications and derived works, and must allow them to be distributed under the same terms as the license of the original software.

4. Integrity of The Author's Source Code

The license may restrict source-code from being distributed in modified form only if the license allows the distribution of "patch files" with the source code for the purpose of modifying the program at build time. The license must explicitly permit distribution of software built from modified source code. The license may require derived works to carry a different name or version number from the original software.

Open Source Definition

5. No Discrimination Against Persons or Groups

The license must not discriminate against any person or group of persons.

6. No Discrimination Against Fields of Endeavor

The license must not restrict anyone from making use of the program in a specific field of endeavor. For example, it may not restrict the program from being used in a business, or from being used for genetic research.

7. Distribution of License

The rights attached to the program must apply to all to whom the program is redistributed without the need for execution of an additional license by those parties.

8. License Must Not Be Specific to a Product

The rights attached to the program must not depend on the program's being part of a particular software distribution. If the program is extracted from that distribution and used or distributed within the terms of the program's license, all parties to whom the program is redistributed should have the same rights as those that are granted in conjunction with the original software distribution.

9. License Must Not Restrict Other Software

The license must not place restrictions on other software that is distributed along with the licensed software. For example, the license must not insist that all other programs distributed on the same medium must be open-source software.

*10. License Must Be Technology-Neutral

No provision of the license may be predicated on any individual technology or style of interface.

What is SourceForge.net offer ?

The screenshot shows the SourceForge.net website in a Firefox browser window. The browser's address bar displays 'http://sourceforge.net/'. The website's navigation menu includes 'my sf.net', 'software map', 'donate to sf.net', 'about sf.net', and 'My Favorites'. On the left sidebar, there are sections for 'Login via SSL', 'New User via SSL', 'Search' (with a dropdown for 'Software/Group' and a 'Search' button), 'SF.net Subscription' (with links for 'Subscribe Now', 'Manage Subscription', 'Advanced Search', 'Direct Download', 'Priority Tech Support', and 'Project Monitoring'), 'SF.net Resources' (with links for 'Site Docs', 'Site Status (11/12)', 'SF.net Supporters', 'Compile Farm', 'Foundries', 'Project Help Wanted', 'New Releases', and 'Get Support'), 'Site Sponsors', and 'Most Active'. The main content area features a large banner with the text 'SourceForge.net is the world's largest Open Source software development website, with the largest repository of Open Source code and applications available on the Internet. SourceForge.net provides free services to Open Source developers.' Below the banner are three columns of content: 'Project of the Month' (highlighting 'PearPC' for November 2004), 'Be a Power User!' (promoting a \$39/year subscription for premium services), and 'Two ways to give back to SF.net' (encouraging donations via PayPal). On the right side, there are sections for 'SourceForge.net Statistics' (showing 90,643 registered projects and 952,853 registered users), 'SourceForge.net Newsletter' (with an email address field and a 'Subscribe me!' button), and 'Latest News' (highlighting 'JGraphpad (v5.1.0) Released' by d_benson on 2004-11-12).

November 12th, 2004 - 10:00AM EST

Cherry Bim Bom Bim Bom Bim Bom

We just released Gaim 1.0.3. It's another bug fix only release. See the [ChangeLog](#).

October 20th, 2004 - 1:31AM

Happy Halloween

We released an extra-spooky Gaim 1.0.2 a bit early in response to some just discovered spooky bugs. More information about the bugs are [here](#) and more information about Gaim 1.0.2 is [here](#).

October 9th, 2004 - 4:07PM EST

What's up, Nostradamus

Gaim 1.0.1 was released the other day, but we seem to have forgotten to update the webpage. Whoops. Hey, there's a [ChangeLog](#)!

September 17th, 2004 - 7:00PM EST

Hott

We released Gaim 1.0.0. See the [ChangeLog](#). Enjoy!

Project Tracker

The screenshot shows a web browser window displaying the SourceForge.net Project Tracker for the Gaim project. The browser's address bar shows the URL https://sourceforge.net/tracker/?group_id=235. The page features a navigation menu with links for Summary, Admin, Home Page, Forums, Tracker, Bugs, Support, Patches, RFE, Lists, Screenshots, News, CVS, and Files. A sidebar on the left contains sections for 'Register New Project', 'Search' (with a dropdown menu for 'Software/Group' and a 'Search' button), 'SF.net Subscription' (with links for Manage Subscription, Advanced Search, Direct Download, Priority Tech Support, and Project Monitoring), 'SF.net Resources' (with links for Site Docs, Site Status (11/12), SF.net Supporters, Compile Farm, Foundries, Project: Help Wanted, New Releases, and Get Support), 'Site Sponsors', and 'Most Active' (listing 1. Azureus - BitTorrent Client, 2. Gaim, 3. eGroupWare: Enterprise Collaboration, and 4. Compiere ERP+). The main content area is titled 'Project: Gaim: Trackers' and includes a 'Reporting | Admin' section with the instruction 'Choose a tracker and you can browse/edit/add items to it.' Below this, several trackers are listed with their respective counts: Bugs (616 open / 8373 total), Support Requests (54 open / 593 total), Patches (207 open / 1789 total), Feature Requests (1367 open / 2265 total), Plugins (42 open / 244 total), and gtk-bugs (57 open / 83 total). The browser's status bar at the bottom shows 'Done' and the SourceForge.net logo.

About CVS

CVS (Concurrent Versions System) is a tool used by many software developers to manage changes within their source code tree. CVS provides the means to store not only the current version of a piece of source code, but a record of all changes (and who made those changes) that have occurred to that source code. Use of CVS is particularly common on projects with multiple developers, since CVS ensures changes made by one developer are not accidentally removed when another developer posts their changes to the source tree.

Information about accessing this CVS repository may be found in our document titled, "[Basic Introduction to CVS and SourceForge.net \(SF.net\) Project CVS Services](#)".

In order to access a CVS repository, you must install a special piece of software called a CVS client; CVS clients are available for most any operating system. Information about CVS client software may be found in our document titled, "[Basic Introduction to CVS and SourceForge.net \(SF.net\) Project CVS Services](#)".

Anonymous CVS Access

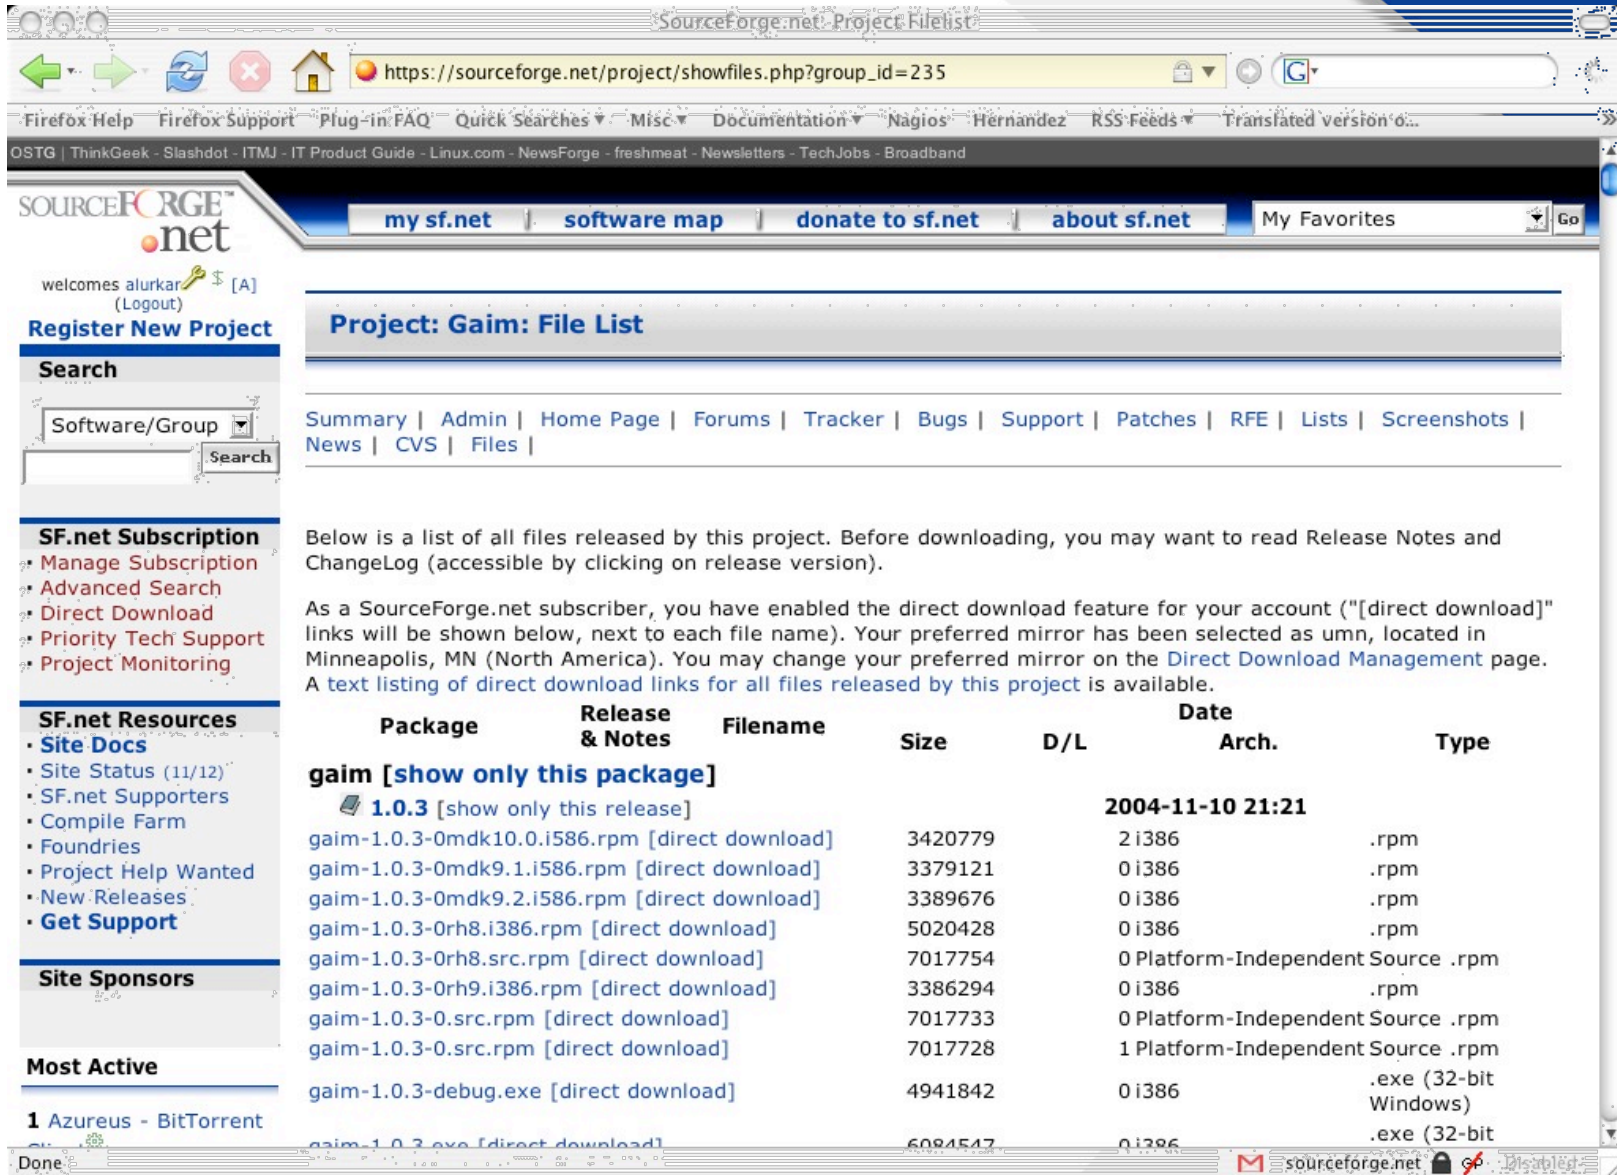

This project's SourceForge.net CVS repository can be checked out through anonymous (pserver) CVS with the following instruction set. The module

Browse the CVS Tree

Though CVS repositories are most commonly accessed using a special piece of software called a CVS client, we also provide a web-based interface to view CVS repositories. Browsing the CVS tree gives you a great view into the current status of this project's code. You may also view the complete histories of any file in the repository.

- [Browse CVS Repository](#)

Project File Releases

The screenshot shows a web browser window displaying the SourceForge.net project page for Gaim. The browser's address bar shows the URL: https://sourceforge.net/project/showfiles.php?group_id=235. The page title is "Project: Gaim: File List". The left sidebar contains navigation links such as "my sf.net", "software map", "donate to sf.net", and "about sf.net". Below the sidebar, there is a search bar and a list of "Most Active" projects, with "1 Azureus - BitTorrent" listed first. The main content area features a navigation menu with links like "Summary", "Admin", "Home Page", "Forums", "Tracker", "Bugs", "Support", "Patches", "RFE", "Lists", "Screenshots", "News", "CVS", and "Files". A paragraph of text explains that as a SourceForge.net subscriber, direct download links are enabled for the account. Below this text is a table of file releases for the Gaim project.

Package	Release & Notes	Filename	Size	D/L	Date	Arch.	Type

With a new job from SourceForge.net Tech Jobs

SourceForge.net compile farm

The screenshot shows a Firefox browser window with the address bar containing the URL `http://sourceforge.net/docman/display_doc.php?docid=762&group_id=1#hosts`. The page content is as follows:

02 Host List

The following OS platforms and hardware architectures are represented in the SourceForge.net Compile Farm:

32-bit x86 Architecture:

- *x86-linux2*: Fedora Linux FC2 running Linux 2.6 kernel
- *x86-openbsd1*: OpenBSD 3.4
- *x86-solaris1*: Sun Solaris 9
- *x86-linux1*: Debian GNU/Linux 2.2 running Linux 2.4 kernel (included to match current library load of project web servers)
- *x86-freebsd1*: FreeBSD 4.8
- *x86-netbsd1*: NetBSD 1.6.1

AMD 64-bit (Opteron) Architecture:

- *amd64-linux1*: SuSE 8 ES running Linux 2.4 kernel

DEC Alpha (ev67) Architecture:

- *alpha-linux1*: Debian GNU/Linux 3.0 running Linux 2.2 kernel

PowerPC Architecture:

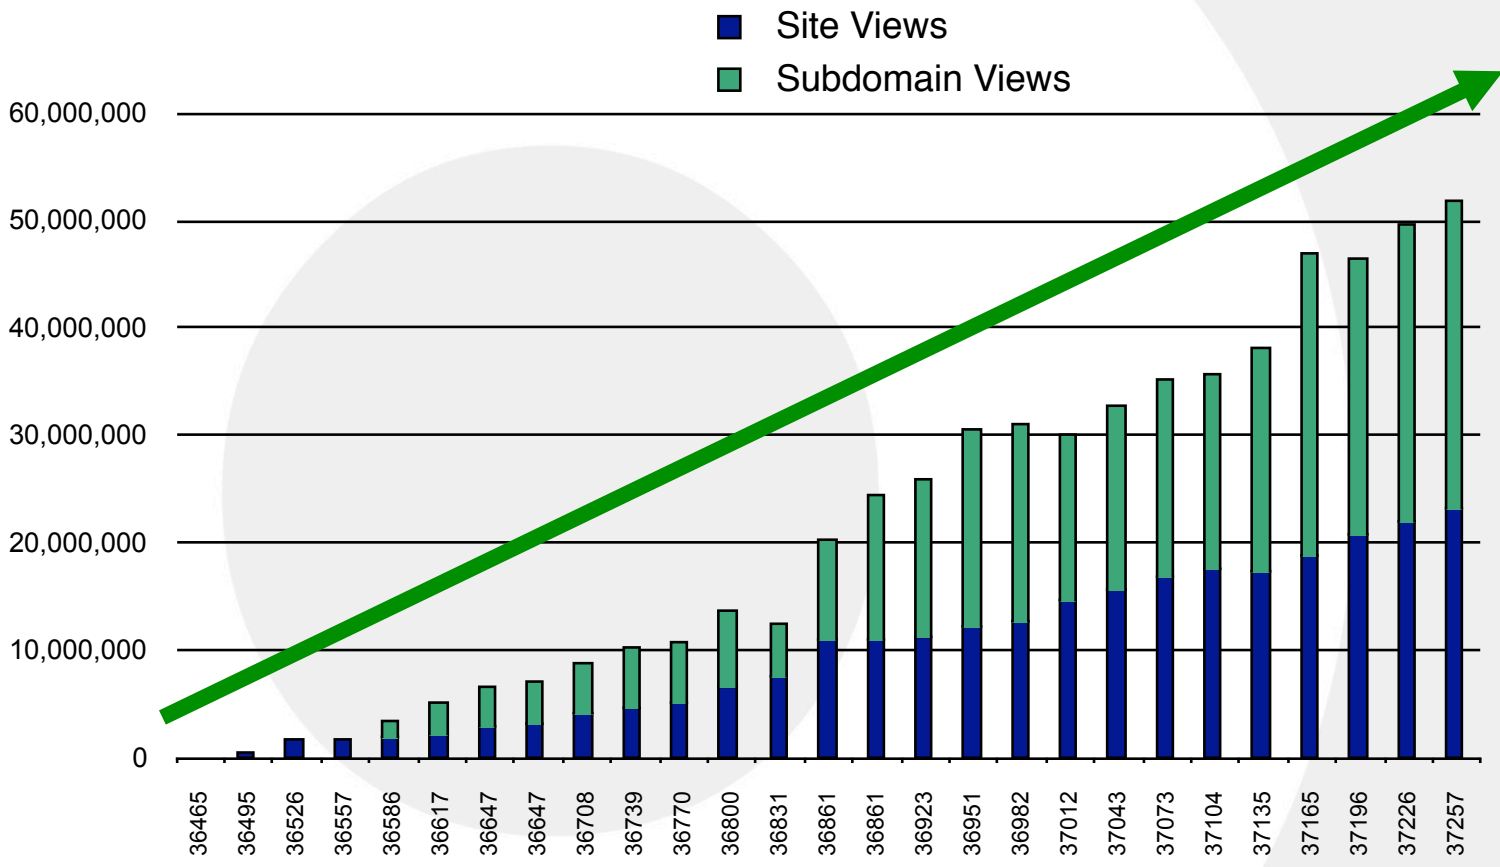

- *ppc-osx1*: Apple Mac OS X 10.1 Server with [Fink](#) running on an Apple Mac G4
- *ppc-osx2*: Apple Mac OS X 10.2 Server with [Fink](#) running on an Apple Mac G4

Sparc (UltraSPARC-II) Architecture:

- *sparc-solaris1, sparc-solaris2*: Sun Solaris 9, running on two Sun Enterprise 220R systems

The hostnames shown in this host list may be used to [access a particular Compile Farm host from the Compile](#)

SourceForge Enterprise Edition

The screenshot shows a web browser window titled "SourceForge : Welcome". The address bar contains "https://sf4.vasoftware.com/sf/sfmain/do/home". The browser's navigation bar includes Home, Back, Forward, Reload, and Stop buttons. Below the navigation bar, there are search and bookmarks fields. The main content area features a blue header with the SourceForge logo and navigation links for Home, Projects, and Search. On the left side, there is a "Log In to SourceForge" section with input fields for "User Name" and "Password", a "Forgot Your Password?" link, and a "Log In" button. Below this is a "New Users" section with a "Create an Account" link and a note about account activation. The "Most Active Projects" section lists four projects: 1. Llama Apache Module Development, 2. Rhea Development, 3. sf-saturn, and 4. Product Development Management, each with a progress bar. The central content area displays "SOURCEFORGE® 4.1 ENTERPRISE EDITION" and a welcome message. Below this is a "SourceForge News" section with a headline "SourceForge Explorer Evaluation Tapestry Release - SourceForge Explorer" and a brief description. The browser's status bar at the bottom shows "Document: Done".

[Development](#)

[Authors](#)

[Links](#)

PearPC 0.3.1

Submitted by [Seppel](#) on September 5, 2004 - 19:30, GMT +0200.

This is mainly a maintainece release fixing some wrong/unimplemented keyboard mappings, a JITC bug preventing Java applications to run and a partition table problem. Additionally the BEOS port was updated.

Important note: This release fixes an ugly partition mapping bug which prevented PearPC to boot OpenDarwin. But the fix might cause regressions: so if your image is no longer booting and you can compile pearpc yourself, please talk to the [pearpc-devel mailing list](#).

[Full ChangeLog](#) | [Downloads](#) | [Config file format](#)

PearPC 0.3.0

Submitted by [Seppel](#) on August 13, 2004 - 18:30, GMT +0200.

The most important change of this release are the accurate timing facilities which made PearPC faster and allowed us to implement idle-sleep. So PearPC no longer consumes CPU time when the client is idle. Other changes are an SDL port (faster graphics), full screen support for Win32 and SDL and of course a lot of optimizations.

Note that there are again some small config file changes, so please update your config file from the shipped ppccfg.example. I also updated the [about](#) page to reflect recent

Mailman, the GNU Mailing List Manager

Mailman is free software for managing electronic mail discussion and e-newsletter lists. Mailman is integrated with the web, making it easy for users to manage their accounts and for list owners to administer their lists. Mailman supports built-in archiving, automatic bounce processing, content filtering, digest delivery, spam filters, and more. See the [features page](#) for details.

Mailman is free software, distributed under the [GNU General Public License](#). Mailman is written in the [Python](#) programming language, with a little bit of C code for security.

The name of this software is spelled *Mailman* with a capital leading *M* and a lowercase second *m*. It is incorrect to spell it "MailMan" (i.e. you should not use StudlyCaps).

Current Version

Version 2.1.5, (released on 15-May-2004) is the current released version of Mailman, in production at many sites.

Acknowledgements

Mailman's lead developer is [Barry Warsaw](#) who can be contacted at barry@python.org.

Thanks go to [Control.com](#) for their sponsorship of new Mailman 2.1 features such as the tonic filters.

Welcome to the Gallery Project Page

Gallery is a web based software product that lets you manage your photos on your own website. You must have your own website with PHP support in order to install and use it. With Gallery you can easily create and maintain albums of photos via an intuitive interface. Photo management includes automatic thumbnail creation, image resizing, rotation, ordering, captioning, searching and more. Albums can have read, write and caption permissions per individual authenticated user for an additional level of privacy. Give accounts to your friends and family and let them upload and manage their own photos on your website!

We hope you will enjoy using Gallery,
- [The Gallery Development Team](#)

Professional Open Source™ from JBoss Inc.

JBoss is the leader in the second generation of open source, which we have termed Professional Open Source. The Professional Open Source methodology is based on the following:

1. We hire and pay experts in the open source community to write exceptional and innovative software full-time.
2. We only use open source **licenses** that are friendly to end-user IT shops, independent software vendors, and the community itself.
3. Directly and through our authorized partners, we deliver the best **support services** available; all of which are backed up by the real product experts.
4. Unlike first generation open source providers, we control the direction and source code for our projects. We can ensure that all bug fixes and patches are rolled into future versions of our products.
5. By combining enterprise-proven technology, business-friendly open source licenses, and world-class support services, we have made Professional Open Source the safe choice for end-user enterprises and independent software vendors alike.

Crystal Core Progress

By: on: Fri 01 of Oct, 2004 [14:16 UTC] (49 reads)

For those who haven't been following progress on [Crystal Core](#) closely you can have a look at the [screenshots](#). We now have a working player model (using cal3d). It still needs some work (mostly texturing and animation) but it is looking good already. We are also expecting a female player model soon.

Crystal Space Listed at DevMaster.net

By: on: Fri 01 of Oct, 2004 [07:49 UTC] (37 reads)

Crystal Space is listed at [DevMasters.net](#). If you like Crystal Space (or even if you don't :-)) then you can rate and review Crystal Space there. Thanks!

ANNOUNCE: XSS Patch Release for 1.4.3a
Nov 10, 2004 by Jonathan Angliss
A small vulnerability exists in the decoding of certain headers which could allow for a remote user to exploit a cross site scripting vulnerability.
A patch has been released to resolve this issue, and can be downloaded at:
<http://prdownloads.sourceforge.net/squirrelmail/sm143a-xss.diff?download>
Further information can be read here:
<http://article.gmane.org/gmane.mail.squirrelmail.user/21169>
Thanks,
SquirrelMail Development Team

ANNOUNCE: SquirrelMail 1.4.3a Released
Jun 02, 2004 by Jonathan Angliss
The SquirrelMail development team are pleased to announce the release of 1.4.3a. This release contains a minor bug fix that seemed to have caused some issues with users in replying to mail. This release

v1.0.3

November 12th, 2004 - 10:00AM EST **Cherry Bim Bom Bim Bom Bim Bom**

We just released Gaim 1.0.3. It's another bug fix only release. See the [ChangeLog](#).

October 20th, 2004 - 1:31AM **Happy Halloween**

We released an extra-spooky Gaim 1.0.2 a bit early in response to some just discovered spooky bugs. More information about the bugs are [here](#) and more information about Gaim 1.0.2 is [here](#).

October 9th, 2004 - 4:07PM EST **What's up, Nostradamus**

The screenshot shows a web browser window titled "Fink - Home" with the address bar containing "http://fink.sourceforge.net/". The browser interface includes navigation buttons (Home, Back, Forward, Reload, Stop), a search bar with "Google", and a bookmarks bar with "Camino Info", "News", "Mac News Tabs", "Google", and "My Yahoo!".

The main content area features the Fink logo on the left and a "Hosted By" badge for "SOURCEFORGE.net" on the right. A "Sections" sidebar on the left lists: Home, Index (highlighted), News, About, Contributors, Links, Download, Packages, Help, F.A.Q., Documentation, and Mailing Lists.

The main text under "Index" reads: "The Fink project wants to bring the full world of Unix [Open Source](#) software to [Darwin](#) and [Mac OS X](#). We modify Unix software so that it compiles and runs on Mac OS X ("port" it) and make it available for download as a coherent distribution. Fink uses [Debian](#) tools like dpkg and apt-get to provide powerful binary package management. You can choose whether you want to download precompiled binary packages or build everything from source. [Read more...](#)"

The "News" section is titled "2004-10-15: Workaround for gcc problems." and contains the text: "The version of gcc included with XCode 1.5 is known to produce incorrect output from c++ code under certain circumstances. Fink now has a mechanism to warn users about this, and Fink will soon refuse to use the "broken" gcc to compile packages which are known to have this problem." Below this, it says: "If you have already upgraded XCode to version 1.5, there is a workaround, described [here](#) and".

The "Status" section is titled "Status" and contains the text: "Fink 0.7.1 was released on 20 September 2004. This release includes source and binary packages as well as a binary installer, all intended for users of OS X version 10.3. Fink 0.6.3 (for OS X 10.2) and 0.4.1 (for OS X 10.1) also remain available."

The "Resources" section is titled "Resources" and contains the text: "If you're looking for support, check out the [help page](#). That page also lists various options to help the project and submit feedback."

The browser status bar at the bottom left shows "Document: Done".
