

Hacking Jekyll Websites

A discussion on website design using the Jekyll static site generator

7 pm on 16th April, Explorit Science Center, 3141 5th St, Davis

We are looking at rebranding LUGOD, and a new website is a part of the makeover. To that end, we plan to discuss how Jekyll can be used to design and deliver a great website.

We would love to invite web developers, designers and hackers to a demonstration of Jekyll development, and exchange ideas of how to make a good web impact.

Whether you're a member of LUGOD or interested in web design, we'd welcome you to the discussion.
