

The Linux Users' Group of Davis presents:

Post-Processing High Dynamic Range Panoramic Photographs Using Open Source Tools

This talk will present Open Source tools that can be used to post-process High Dynamic Range (HDR) photographs and panoramas, including:

- Hugin – panorama photo stitcher
- PFSTools – read, write, manipulate and view HDR images
- PFSTmo – tone mapping operators
- PFS calibration – photometric calibration of HDR and LDR cameras
- dcraw – decodes Raw, unprocessed CCD data files

Monday, July 16th
6:30pm – 9:00pm
