What can I do with Inkscape?
In 1971, 400-500 seeds of 5 tree species orbited the moon 34 times with Stuart Roosa on the Apollo 14 mission to highlight the U.S. Forest Service. Upon their return, the seeds were grown and distributed around the country and to some international cities, but the locations of the vast majority of the trees is unknown. This map shows only trees on public property.
